

**Modelling and measuring redundancy in multiple exponence
for the purposes of typology**

Matthew Carroll (Surrey)

LingLunch du jeudi 28 février 2019

Matthew J Carroll is a Newton International Fellow hosted at the Surrey Morphology Group. His current project examines distributed exponence and inflectional redundancy from both formal and typological perspectives. Prior to this fellowship, he completed his PhD at the Australian National University, where he worked on the previously undescribed language Ngkolmpu, a Papuan language of the Yam family spoken in West Papua notable for its morphological complexity.
